## PROJECTS

**Linguauna (Rails, React/Flux)** | [live](#) | [github](#)

*A gamified, Duolingo-inspired web app for language learning*

- Saves user's progress through completion models with polymorphic associations
- Implements OmniAuth for simple signin through Google and Facebook
- Sets data in cookies to track current course and language even when signed out

**Timestack (JavaScript, Angular)** | [github](#) | [download](#)

*A Chrome extension for setting and managing multiple timers*

- Runs timer intervals in a background page by using Chrome's runtime API
- Shows timer progress through an animated HTML canvas icon
- Custom Angular directives prevent user from inputting invalid values

**Cosmic Rush (Javascript, HTML5)** | [live](#) | [github](#)

*A colorful, Space Invaders-style shoot-em-up game for the browser*

- Registers object collisions by employing two different collision-detection algorithms
- Enemies move in interesting patterns by means of vector math and linear equations

**RecLite (Ruby, SQL)** | [github](#)

*An Object Relational Mapping library with the core functionality of ActiveRecord*

- Metaprograms functions for conveniently finding models based on their attributes
- Tiered inheritance and multiple modules keep the code DRY and extensible
- Lazily evaluates 'where' clauses to reduce queries by only firing them when needed
